Standby power rating is for the supply of emergency power at variable load for the duration of the non-availability of the mains. No overload capacity is available at this rating. A standby rated engine should be sized for an average load factor of 80% based on published standby rating for 500 oper. hours per year. Standby ratings should never be applied except in true emergency power failure conditions.

Prime power rating is available for unlimited hours per year with a variable load of which the average engine load factor is 80% of the published power rating, incorporation of a 10% overload for 1 hour in every 12 hours of operation which permitted

Continuous power rating is available for continuous full load operation. No overload is permitted.

Acc. to 3046/1, BS 5514, DIN6271

STANDARD GENERATOR FEATURES

- Automatic mains failure microprocessor controller
- Heavy duty diesel engine
- Tropical radiator
- Electric starter
- 3 pole circuit breaker for generator protection
- Acid batteries
- DC alternator
- Selfexcited, brushless synchronous alternator
- Heavy duty chassis with antivibration dumpers
- Industrial mufflers with 19 dBA sound reduction
- Control system with engine and generator protection
- Special designed fuel tank cassette type
- Mechanical fuel level gauge
- Revision hole on fuel tank for cleaning purpose
- Factory load test CosΦ=1
- Factory functional test of all systems
- Exhaust gases compensator

OPTIONAL GENSET EQUIPMENT

- Battery charger 230V
- Engine coolant heater 230V
- 3P ATS changeover switch
- Soundproofed canopy according 2000/14/EC
- DIN ISO container
- Road trailer
- Non-road trailer
- 4-pole generator circuit breaker
- Differential protection
- Doublewall fuel tank with fuel leakage sensor
- 24h autonomy fuel tank and/or external fuel tanks
- System for automatic refueling from external fuel tank
- Supersilent canopy 55 dBA
